## Environmental Policy Statement

Our main processes include the receipt and sorting of wood, Upvc, and plasterboard waste from civic recycling centres, commercial, construction, and packaging waste streams. Materials which are not suited for reuse are processed with a variety of equipment for use in a range of recycling operations.

We believe that our overall environmental impact is positive. Our business focuses upon the creation of products and raw materials from materials which might otherwise be sent to landfill

Our policy is to meet and, where practical, exceed all relevant regulatory requirements and to minimise any adverse environmental effects caused as a result of our activities or products. To ensure adequate resources are available, and that all staff are aware of our responsibilities. To review the success of our efforts, and to see how they may be improved, and to keep our policy relevant to the changing nature of our business.

We are committed to working with our suppliers to ensure that there is a good level of awareness regarding which materials are acceptable for recycling. The close regulation of incoming material enables our company to provide assurance to the end users of our products, regarding the nature of the supply chain and the control of contamination.

We recognise the potential impact of neighbourhood nuisance such as noise and dust generation. Measures are in place to manage such issues. Tawmix recognises that all employees have an important environmental management role. Individuals are helped to perform this role as best they can through the development of environmental training sessions and the use of suggestion schemes.

This policy is reviewed and updated on a regular basis.

Signed:

Mr Julian Tolley, Director
